

Build your own Ivory Tower!!!

Quick! Easy!
& Fully Destructible!!!

This tower is adapted from Brian Burger's "Short Tower." Used with Brian's explicit permission! Check out more cool towers etc. on his website:
<http://www.warbard.ca/2010/09/25/fantasy-terrain-15mm-bldgs/>

Tower Instructions:

(From <http://www.warbard.ca/2010/09/25/fantasy-terrain-15mm-bldgs/>)

The Short Tower, with a unit of Dwarves in front.

Topmost is the long narrow **battlements** piece, which will be folded in half lengthwise, then folded around the top of the Tower to form four battlemented wall. This is the most complex part of the tower.

Cut around the outside edges, and remove all the small squares inside (marked 'Cut' or 'C'). On the half marked 'Inside Edge', cut the four edges between the wall sections. Fold the four glue tabs up, and then fold the central long fold down, and glue the two halves of the wall together, leaving an unglued space for the glue tab to slot into. (see the next step)

Fold the battlements up at all four corners, and slide the glue tab into the space.

The Walls: Much easier than the battlements, trust me! First, cut out the small **Arch** section, and stick it around the door. Then just cut the cross-shaped wall-and-floor piece out, cutting the central square out (you'll need access to the inside for gluing). Fold the

glue tabs down, and the tabs on the tops of the wall.

Glue the walls together, sticking a finger into the inside of the tower for support.

Glue the **battlements** piece on next, then the square **Top (roof)** section inside the battlements.

Finish: Glue the completed tower onto the Base & Forecourt section. (You might want to put a bit of weight - pennies or something - to ballast the Tower and make sure it stays where it's put!) Finished!
