- \* Janis's mucking around with the SFU Library "how to get a printing card" video: <http://popcorn.webmadecontent.org/153r>
- \* Alfreds' project <http://popcorn.webmadecontent.org/153z>

How can this tool be applied in your courses and/or activities?

\*

### Place your user feedback on Popcorn Maker here:

- \* Snappin feature for dropping events into the timeline would be useful for more precise editing (e.g. snap to match a google map with a place mentioned in a youtube video)
- \* Would be nice if the maker grabbed screen recordings for input
- \* Animation would be cool! Eg. zooming in w/ Google Map
- \* Would like basic graphic objects like arrows, boxes for drawing attention to things
- \* Need an undo tool
- \* option to pull in ppt
- \* some indication that text is a clickable link? ( I see the arrow in the popup)
- \* integrate Popcorn Maker with Kaltura and/or with LMS ie Moodle, Canvas

After all the video links are posted & shared, a blog post wrapping up today's hack jam featuring everyone's projects will be available on Mozilla BC Canada Webmaker blog <http://bc.mozillacanada.org/>
